Abstract

This paper discusses the role of financial indicators given from financial data of the banking organisations concerning the continuity of their future activities, this aims at knowing the most important indicators and its ability in evaluating the work and performance of the banking organisations.

This paper includes also applied study on the Bank Audi Syria, which aims at showing how able the banks is concerning concluded in its future activities, based on its financial indicators.

The researcher concluded several results and recommendations. That explain the falling down of the financial work and performance of the bank due to the exceptional financial circumstances that Syria experiences, and have some indicators with negative values. Besides, the paper proved the ability of financial indicators given from the currency flow lists to provide a more clear account on the financial situation of the bank and hence its ability to continue. The researcher has asserted the necessity that those who are in charge of the banking sector to pay more attention to these indicators that predict the weak ability to continue in the future and to take some actions that can support and sustain it.
