

Name: Tareq Musbah Al-qirim
Date of Birth: 1970
SEX: Male
Marital Status: Married.
Nationality: Jordanian
Current Address: Dean of scientific research and graduate studies, at Al-Zaytoonah University of Jordan,
Faculty of Pharmacy, P.O.Box 130 Amman 11733 Jordan,
Airport Highway Street, Jordan
Tel: +9624291511 Ext. 307
+962777388090
E-mail: qirim70@yahoo.com

Date of Appointment: 23-3-2003

EDUCATION:

1) Ph. D in Biochemistry. Aligarh University (India) 2000-2003

Thesis: Effect of Khat on different parameter in rats.

2) MSc degree in Biochemistry. Aligarh University (India) 1997-1999

MSc Courses:

- Bio-Organic Chemistry
 - Bio-Physical Chemistry
 - Structure & Function of the Proteins
 - Advanced Enzymology
 - Intermediary Metabolism
 - Molecular Cell Biology
 - Biotechnology
 - Molecular Genetics
 - Immunology
- Research Project

3) BSc degree in Medical Lab Technology. Applied Science University (Jordan) 1991-1996.

4) Diploma in Medical analysis. Arab Community College. (Jordan) 1989-1991.

SCIENTIFIC ACTIVITIES AND COMMUNICATIONS:

CV of Tariq Al-qirim

- **Member of Quality Assurance Unit** at Faculty of Pharmacy, Al-Zaytoonah University of Jordan, **2009**.
- **Chairman** for the pharmaceutical conference committee at Faculty of pharmacy, Al-Zaytoonah University of Jordan, **2006-2010**

Grants:

1- University grant commission (India)

2- Short-term feeding effect of Miswak and Origanum syriacum L on blood constituents in rats. Al-Zaytoonah University

Instrumental and Computer Skills:

Very good in computer skills (ICDL).

Excellent in experimental rats handling

Professional Experience:

2003 *Assistant Professor* at Al-Zaytoonah University.

2010 *Associate Professor*

Teaching Experiences:

- 1- Pharmaceutical Biochemistry-1
- 2- Pharmaceutical Biochemistry-2
- 3- Clinical Biochemistry
- 4- Clinical Nutrition
- 5- Pharmaceutical Biochemistry-1 LAB
- 6- Biochemistry for Nursing

Languages: Arabic (*native*), English (*Excellent*).

Research Interests:

Free radical is any species capable of independent existence that contains one or more unpaired electrons, these free radicals were generated by using stress and especially Forced immobilization stress since this model combines emotional stress (escape reaction) and physical stress (muscle work), resulting in both restricted mobility and aggression.

The stress-induced free radicals were evaluated by measuring enzymatic antioxidant such as superoxide dismutase, catalase and glutathione-s-transferase, also I have measured the non-enzymatic antioxidants such as uric acid, glucose and reduced glutathione (GSH).
