Research Interest:

My major research interest is the effects of herbivory on vegetation, mainly at the population level. My doctorate research focused on the regrowth dynamics and population abundances of some selected tallgrass prairie plant species (forbs and grasses) in response to bison grazing. I'm involved in a research project to study the effects of grazing by different echinoids on marine algae. Recently, I'm involved in a research project about aquaculture. Moreover, I'm interested in studying the effects of grazing on the marginal rangelands and how it might affect these systems regarding desertification. Studying and conducting ecological surveys and vegetation analysis of different Biogeographical regions in Jordan. *Currently, I am involved in ecological research with a group of researchers from Karachi University (2013 till present) conducting joint ecological research at different regions in the Sindhi area, Pakistan.*
