

Detailed Course Description - Course Plan Development and Updating Procedures/ Department of Computer Science	QF01/0408-3.0E
--	----------------

Faculty	Science & I.T.	Department	Computer Science
Course number	0112462	Course title	Computer Graphics
Number of credit hours	3	Pre-requisite/co-requisite	Linear Algebra 1

Brief course description

This course aims to present basic principles for the design, use, and understanding of computer graphics systems and applications. Its topics cover 2D and 3D shapes, their representations, drawing algorithms, and transformations. Implementation of graphics algorithms is explained with examples using a high-level language (such as C++ or Java) and OpenGL library.

Course goals and learning outcomes	
Goal 1	Ability to use the principles of computer science in understanding, implantation and analysis of mathematical problems and finding their solutions.
Learning outcomes	1.1 Student should be able to write programs to plot different mathematical functions. 1.2 Student should be able to use mathematical concepts in algorithm analysis. 1.3 Apply and implement line and polygon clipping. 1.4 Apply and implement linear transformations.
Goal 2	Ability to analyze, design and implement efficient and reliable computer programs.
Learning outcomes	2.1 Student should know different programming methods. 2.2 Choose the suitable methods for drawing lines and shapes based on the required applications. 2.3 Student should be able to account for hardware and environment limitations when implementing computer programs with graphics.
Goal 3	Ability to draw shapes with vector graphics.
Learning outcomes	3.1 Student should know the concepts of vector graphics and differentiate them from other types of image representations. 3.2 Student should be able to write programs to draw 2D and 3D vector graphics in a high-level language (such as C++ or Java) and OpenGL library.
Goal 4	Ability to apply and implement common computer graphics algorithms.
Learning outcomes	4.1 Apply common algorithms for drawing 2D and 3D shapes. 4.2 Apply common algorithms for graph processing, such as filling and transformation. 4.3 Student should be able to map world coordinates to viewing coordinates and to perform the required clipping.
Textbook	1. V. Scott Gordon and John L. Clevenger, <i>Computer Graphics Programming in OpenGL with Java</i> , Mercury Learning & Information; Har/Cdr Edition, 2017. (Main textbook used in the course timeline) 2. D.D. Hearn, M.P. Baker and W. Carithers, <i>Computer Graphics with OpenGL</i> , 4 th Ed., 2010.
Supplementary references	1. Edward Angel and Dave Shreiner, <i>Interactive computer graphics: a top down approach with WebGL</i> , 7 th Ed. (Global Edition), 2015. 2. Graham Sellers, Richard S. Wright, Jr., Nicholas Haemel, <i>OpenGL SuperBible: Comprehensive Tutorial and Reference</i> , 7 th Ed., 2015. 3. John Kessenich, Graham Sellers, Dave Shreiner, <i>OpenGL Programming Guide</i> :

The Official Guide to Learning OpenGL, 9th Ed., 2016.

Course timeline

Week	Number of hours	Course topics	Pages (textbook)	Notes
01	1	A Survey of Computer Graphics Applications	Ch1 & Ch2	
	1	Computer Graphics Hardware		
	1	Video Display Devices		
02	1	Three-Dimensional Viewing Devices	Ch2	
	1	Stereoscopic and Virtual-Reality Systems		
	1	Graphics Workstations and Viewing Systems		
	1	Input Devices		
03	1	Other Graphics Packages & Introduction to OpenGL	Ch3& Ch4	
	1	Basic OpenGL Syntax & Related Libraries		
	1	Header Files & Display-Window Management Using GLUT		
04	1	A Complete OpenGL Program	Ch3& Ch4	
	1	Examples & review		
	1			
05	1	Point Drawing & Line-Drawing Algorithms	Ch6	
	1	Line Equations & DDA Algorithm		
	1	Bresenham's Line Algorithm		
06	1	First Exam	Ch6	
	1	Properties of Circles		
	1	Midpoint Circle Algorithm		
07	1	General Scan-Line Polygon-Fill Algorithm	Ch6	
	1	Scan-Line Fill for Regions with Curved Boundaries		
	1	Boundary-Fill Algorithm		
	1	Flood-Fill Algorithm		
08	1	Two-Dimensional Geometric Transformations	Ch7	
	1	Translation, Rotation & Scaling		
	1	Matrix Representations, Homogeneous Coordinates Translation Matrix, Rotation Matrix, & Scaling Matrix		
09	1	Pivot-Point Rotation General & Fixed-Point Scaling	Ch7	
	1	Two-Dimensional Composite Transformations		
	1	Reflection		
	1	Shear		
10	1	Clipping Window	Ch8	
	1	Viewing-Coordinate Clipping Window		
	1	World-Coordinate Clipping Window		
	1	Normalization and Viewport Transformations Mapping the Clipping Window into a Normalized Viewport		

Detailed Course Description - Course Plan Development and Updating Procedures/ Department of Computer Science	QF01/0408-3.0E
--	-----------------------

11	1	Two-Dimensional Point Clipping	Ch8	
	1	Two-Dimensional Line Clipping		
	1	Cohen-Sutherland Line Clipping Sutherland--Hodgman Polygon Clipping		
12	1	Examples and Review		
	1	Second Exam		
	1			
13	1	Three-Dimensional Translation & Rotation	Ch9	
	1	Coordinate-Axis Rotations, General Rotations		
	1	Quaternions Methods for Three-Dimensional Rotations		
14	1	Three-Dimensional Scaling & Composite Three-Dimensional Transformations	Ch9	
	1	Three-Dimensional Reflections		
	1	Three-Dimensional Shears		
15	1	Overview of Three-Dimensional Viewing Concepts	Ch10	
	1	Viewing a Three-Dimensional Scene		
	1	Projections Review		
16	1	Final Exam		
	1			

Theoretical course evaluation methods and weight	Participation = 10% First exam 20% Second exam 20% Final exam 50%	Practical (clinical) course evaluation methods	Semester students' work = 50% (Reports, research, quizzes, etc.) Final exam = 50%
