

I am Khalid Al-Sheikh, a student at the Faculty of Civil Engineering in Al-Zaytoonah University of Jordan. Prior to my enrollment at this university, I was a student at the Arab Community College wherein I completed the annual comprehensive exam. I decided to apply to Al-Zaytoonah University because it provides all of the elements necessary to build an ideal and successful learning environment, including a distinguished teaching staff.

While attending the Arab Community College, I worked at Al-Waseet Newspaper as an advertising distributor in order to help fund my education. Eventually, however, I left my job to work as a private tutor for students of engineering and other scientific disciplines to pay off my bachelor's degree tuition in installments. Following my enrollment at Al-Zaytoonah University, I have established an academic team which aims to help students by offering support lectures both inside and outside of the university and providing them with outlines and books. The team also assists in qualifying distinguished students to teach courses inside and outside the university.

I have taken several engineering seminars, such as Quantity Surveying, Proken, Civil 3D, and Primavera, as well as other courses in human development, like the Training of Trainers (TOT). My future ambitions involve finding creative and intelligent approaches to developing weather-resistant infrastructure in Jordan as well as providing clean energy in different aspects of life. I also aim to establish a project that endeavors to reduce energy consumption and utilization in the global regeneration of electricity.
