systematic appraisal of the adult's health status and use critical thinking skills to identify actual or potential alterations in health. The focus is on health assessment and health promotion activities with healthy individuals, as well as on the physical, developmental, psychosocial, and cultural dimensions of client's health. Emphasis will be placed on interviewing skills and communication in taking a health history and differentiating between normal and abnormal physical findings. Diagnostic reasoning process will be applied related to adult health for recognition of common health problems when conducting a head-to-toe physical examination.

0301435	3	Health education	-

This course is designed to prepare nursing students for their educative roles that is appropriate for the changing of healthcare scene and the emergence of technological age that supports greater access to health information. It focuses on the teaching – learning process to place primary emphasis on the clients (individuals, families, groups, and community) as active participants and the nursing students as the resource persons, and mentors. It also helps students to apply the principles of learning theories and educational strategies in the healthcare educational plans and programs that are designed for a selected population in a selected area. The students will be able to identify the learning needs of clients, organize the teaching-learning process, and participate positively in preparing the patient health educational plan. Enhancement is on outcomes as the basis for evaluation of the teaching – learning experience and improvement in the client's health care.

0301104	3	Foundation of Nursing Profession / *Foundation of Nursing			
		Laboratory	Profession / Theory		

This first clinical nursing course gives students the opportunity to gain the clinical skills they need to fulfill people's needs in a safe, legal, and ethical way. It offers students a non-threatening setting in which they may apply nursing knowledge and practice basic nursing skills in a nursing laboratory. The nurse's role as a caregiver, leader, and change agent is explored in this course. This is achieved via competencies that represent supporting an individual's holistic human needs, as well as principles of caring, critical thinking, decision-making, and professional commitment.

0301439	3	Quality in health care	-			
This course is organized to provide theoretical background about the principles that help nursing students						
meeting high quality of patient care services. It is designed to provide knowledge about the process of						
quality improvement and nursing professional experience in quality implementation. This is achieved						
through demonstrating quality improvement strategies to promote patient safety and consumer satisfaction,						
control medical errors, and use information and technology management.

with agreed-upon nursing research steps in both quantitative and qualitative research approaches starting from identifying the research problem, reviewing the lliterature, and formulating a hypothesis. This course also gives students the ability to select appropriate design, recruit appropriate sample, and choose suitable data collection methods. In this course, the students will gain training in analyzing results and interpreting findings based on previous international, regional and local literature then providing conclusions and recommendations. An essential part of this course is orienting students to retrieving scientific literature by using scientific journals and credible scientific web searching sites.
