# Software Engineer

Researches, designs, develops and maintains software systems along with hardware development for medical, scientific and industrial purposes

| How the customer explained it	How the Project Leader understood it	How the Analyst designed it	How the Programmer wrote it	How the Business Consultant described it

How the project was documented	What operations installed	How the customer was billed	How it was supported	What the customer really needed
When software engineering is that complicated, just imagine how the software application produced in such an environment looks like

Dr. Afaf Al-Neaimi
Software Engineering Department
The 2nd Information Technology Colloquium 2012
