## Game Programming

Whenever you write a code that stands of any video or a computer game, you have a game programming.

It may take from one year up to three years to complete one game program.

## Game programming language:

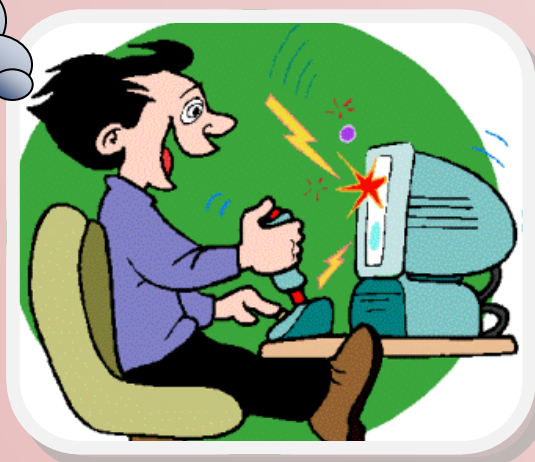

Many factors are taking into consideration while the game programmers make their choice for a programming language:

- \* The target platforms: PlayStation, PSP, Xbox, Wii, Microsoft Windows, ..etc.
- \* The execution speed requirement.
- \* The API (Application Programming Interface) or libraries being used.
- \* And for sure what a language that the programmers are familiar with.

**C++;** as a high level language and built in OO; it is the most popular game development language

Wow ... I knew that I may earn about 6000\$ to 7000\$ a month when I program a game

## Game Programmer

Software Engineer and Computer Science students can be a game programmers. They can design, develop, program and test applications.

No need to be a good graphical designer to be a game programmer.
