

Detailed Course Description - Course Plan Development and Updating Procedures/ Mathematics Department	QF01/0408-3.0E
--	----------------

<b>Faculty</b>	Faculty of Science and Information Technology	<b>Department</b>	Mathematics
<b>Course number</b>	0101452	<b>Course title</b>	Functional Analysis
<b>Number of credit hours</b>	3	<b>Pre-requisite/co-requisite</b>	Real Analysis (2) 0101353

### Brief course description

A first course in functional analysis. Topics include metric spaces, normed linear spaces, inner product spaces, Hilbert spaces, Banach spaces, bounded linear operators on these spaces, and fixed point theorems.

### Course goals and learning outcomes

<b>Goal 1</b>	<b>Understand the basic facts about metric space, normed linear spaces and inner product spaces.</b>
<b>Learning outcomes</b>	1.1 Students will be able to list the basic definition and properties of metric space, normed space, and inner product spaces. 1.2. Recognize the classical examples of metric space, normed space and inner product spaces. 1.3. 2.2. Students will be able to know the relation between metric space, normed space, and inner product spaces.
<b>Goal 2</b>	<b>Know the basic concepts of Banach spaces and Hilbert spaces</b>
<b>Learning outcomes</b>	2.1. Students will be able to list the basic definition and properties of Banach space and Hilbert space. 2.2. Students will be able to differentiate between Banach space and Hilbert space. 2.3. Describe some applications of Banach space and Hilbert space and some examples of such spaces.
<b>Goal 3</b>	<b>Know the basic facts about bounded linear functionals and bounded linear operators.</b>
<b>Learning outcomes</b>	3.1. State the definition and properties of continuous linear operator as well as functionals and duality. 3.2. Describe some applications of linear operator and linear functional.
<b>Goal 4</b>	<b>State and prove basic results about Projection, Orthogonality and Riesz representation theorem.</b>
<b>Learning outcomes</b>	4.1. Students will be able to list the basic definition and properties of Projection, Orthogonality and Riesz representation theorem. 4.2. Describe concrete examples for projection and orthogonality as well as Riesz representation theorem.

<b>Course timeline</b>			
<b>Week</b>	<b>Number of hours</b>	<b>Course topics</b>	<b>Pages (textbook)</b>
01	1	Metric spaces	1-16
	1	Further example of metric spaces	
	1		
02	1	Open set, closed set and neighborhood in metric space	17-27
	1	Convergence sequence in metric space	
	1		
03	1	Cauchy sequence in metric space	28-40
	1	Complete metric space	
	1		
04	1	Examples of completeness in metric space	41-50
	1	Normed space	
	1		
05	1	Banach space	51-71
	1	Further properties of normed spaces	
	1		
06	1	First Exam 20%	73-81
	1		
	1	Finite dimensional normed spaces and subspaces	
07	1	Linear operators	82-85
	1	Bounded linear operators	
	1		
08	1	Continuous linear operators	86-110
	1	Linear functionals	
	1		
09	1	Linear operators and Linear functionals on finite dimensional spaces	111-116
	1		
	1		
10	1	Normed space of operators	117-126
	1	Dual space	
	1		
11	1	Inner product space	127-136
	1	Further example of Inner product space	
	1		
12	1	Hilbert space	137-141
	1	Further properties of inner products spaces	
	1		
13	1	Second Exam 20%	142-150
	1	Orthonormal	
	1	Orthonormal systems	
14	1	Zorn's Lemma	209-217
	1	Hahn-Banach Theorem	

<b>Detailed Course Description - Course Plan Development and Updating Procedures/ Mathematics Department</b>	<b>QF01/0408-3.0E</b>
--	-----------------------

	1		
15	1 1 1 1	Fixed point theorems	299-306
16	1 1 1	Final Exam 50%	

<b>Theoretical course evaluation methods and weight</b>	Participation = 10% First exam 20% Second exam 20% Final exam 50%	<b>Practical (clinical) course evaluation methods</b>	Semester students' work = 50% (Reports, research, quizzes, etc.) Final exam = 50%
