5. Research Interests

Dr. H. Al-Zoubi main current research interests focus on surfaces of finite Chen-type, a topic which has been investigated about 40 years ago from B.Y. Chen corresponding to the first fundamental form of a surface and it has been a topic of active research since then. In this respect, H. Al-Zoubi and others, followed this theme by investigating surfaces of finite type corresponding to the second and third fundamental form of the surface. Another types of research are:

- 1) Studying surfaces of coordinate finite type corresponding to the second and third fundamental form.
- 2) Studying surfaces of coordinate finite type Gauss map corresponding to the second and third fundamental form.
- 3) Studying surfaces of finite type Gauss map corresponding to the second and third fundamental form.

These types of research can be applied on special classes of surfaces such as ruled surfaces, tubes, quadric surfaces, cones, translation surfaces, surfaces of revolution and other more classes.
