Abstract

This study aims to find the effect of cloud accounting software on the accounting profession. The population of this study is 37 manufacturing companies listed in the Amman stock exchange market. This research targeted a sample of randomly distributed 150 and responded to only 112 accountants who work in these companies. The data was gathered through a questionnaire developed for this purpose, and the collected data were analyzed using the SPSS hypothesis test. The researchers concluded that cloud accounting has a positive role in the accounting profession in Jordan among manufacturing companies listed in the Amman stock exchange market in terms of developing efficiency, data quality, and ease of use. However, it has a negative role in the unemployment rate of the accounting profession in Jordan among manufacturing companies listed in the Amman

stock exchange market. This thesis recommended creating further research and studies about cloud accounting and accounting professionals to determine the differences between this relation in terms of the demographic characteristics of the accountants in Jordan in particular and in the globe in general.

Keywords: Cloud Accounting, Accounting profession, Efficiency, Data quality, Unemployment rate, ease of use.
